## **Card Management Solution**

Carta ID is a suite of powerful **integrated software packages** for real-easy design and printing of Photo ID cards.

Easily link your cards to a range of different back-end databases to see your cards populated with your data.

Rapidly create and store any number of card designs using a single-screen point-and-click WYSIWYG card designer.

Select from four different Windows-based editions in the Carta ID suite of products so as to best meet your requirements. Check out **Carta ID Free Lite**, **Carta ID Small Business**, **Carta ID Professional**, **Carta ID Premium** and Carta ID VisitorBook (See features table on last page).

**Carta ID VisitorBook** is a specially tailored edition of Carta ID to enable your organization to **professionally manage visitors**. As well as incorporating many of the features of Carta ID Professional for **ID card production**, it clearly timestamps and **flags visitors IN and OUT** and enables you to generate advanced reports on your visitor data.

With Carta ID You Can

- Link your cards to a range of different back-end Windows and Unix databases to see your cards populated with your data.
- Easily capture live images from cameras or static images from scanners and files for storage in your database and for printing on your cards.
- Using your existing network, enable multiple operators to work simultaneously with the same database to enter data and print cards.
- Use in-built barcode and magnetic stripe encoding modules to issue your cards with security features that can be read using standard barcode and magnetic stripe readers.
- Print & encode in the same run Mifare cards and any other kind of chip cards (contact) calling your own personalization modules.
- Print to different printers according to various pre-defined cards types (hologram or not, encoding or not, etc, ...).
- Manage the issuance of cards (reason & card type, historic, etc...).
- Get extended reporting and audit trail abilities.
- Advance into the modern world of biometric security by capturing signatures and fingerprints. Authenticate captured fingerprints using the Carta ID fingerprint tool.
- **In Belgium**, with a standard card reader connected, you can use the customer E-ID card to populate your DB with 100% correct customer information and afterwards retrieve customer data in a very fast and effective way.
